Abstract
Ce rapport présente les principaux résultats de l'Enquête sur les Indicateurs du Paludisme effectuée au Burkina Faso du 28 septembre au 28 novembre 2014 (EIPBF 2014). Il a été préparé par l'Institut National de la Statistique et de la Démographie, Direction de la Démographie (INSD/DD), le Programme National de Lutte contre le Paludisme (PNLP) et le laboratoire du Centre National de Recherche et de Formation sur le Paludisme (CNRFP) en coordination avec ICF International. Le financement a été assuré par l'USAID pour l'assistance technique d'ICF et les achats de matériels, et par le Fonds Mondial pour les coûts locaux.

Sampling

Sampling Procedure

L'échantillon de l'EIPBF 2014 sera un échantillon aléatoire, stratifié et tiré à 2 degrés. L'unité primaire de sondage est la ZD telle que définie au recensement en 2006. Chaque région est répartie en milieu urbain et milieu rural pour former les deux strates d'échantillonnage dans la région et l'échantillon sera tiré indépendamment dans chaque strate. Au total vingt-six strates d'échantillonnage ont été créées. Au premier degré, 252 ZDs ont été tirées avec une probabilité proportionnelle à la taille ; la taille étant le nombre de ménages dans la ZD pendant l'opération de cartographie pour le recensement de 2006. Avant le tirage de ZDs du premier dégrée, la base de sondage a été triée selon les unités administratives à l'intérieur de chaque strate. Cette opération introduira une stratification implicite au niveau de toutes les unités administratives au-dessous de région avec une allocation de l'échantillon proportionnelle à la taille de l'unité. Les 252 ZDs tirées ont constitué les 252 grappes échantillons de l'EIPBF 2014.

Après le tirage des ZDs et avant l'enquête principale, un dénombrement des ménages et une mise à jour de la carte ont été effectués dans chaque ZD sélectionnée. Cette opération permettra d'obtenir une liste de ménages complète dans chacune ZD tirée et qui a été utilisé plus tard pour sélectionner des ménages au deuxième degré pour les interviews. Pendant le dénombrement et la mise à jour, les ZDs tirées ayant plus de 200 ménages ont été divisées en segments dont un seul a été retenu dans l'échantillon. Cette dernière étape n'est pas considérée comme un degré de tirage, car la segmentation a pour seul objectif de limiter le travail de dénombrement à l'intérieur de la ZD. Au second degré et dans chacune des ZD sélectionnées au premier degré, 26 ménages ont été sélectionnés avec un tirage systématique à probabilité égale, à partir des listes nouvellement établies au moment du dénombrement.

Response Rate

- Taux de réponse des ménages est de 99,7 %.
- Taux de réponse des femmes est de 98,7 %.
- Taux de réponse pour le test de paludisme pour les enfants de moins de cinq ans est de 95 %.

Supervision

L'EIPBF 2014 a été exécutée par l'Institut National de la Statistique et la Démographie (INSD) en collaboration avec le Programme National de Lutte contre le Paludisme (PNLP), et les partenaires techniques et financiers intervenant dans la lutte contre le paludisme.

Pour la bonne marche de l'EIPBF 2014 et pour une meilleure coordination, un Comité de pilotage comprenant des représentants des institutions, parties-prenantes de l'enquête, a été constitué en vue d'orienter, de coordonner et d'assurer le suivi de l'enquête. Ce comité a été consulté sur les grandes orientations du projet et a été informé régulièrement de l'avancement du projet, en particulier sur le plan de travail de l'EIPBF 2014, le protocole des tests, ainsi que le contenu final des questionnaires.

Data Processing & Appraisal

Data Editing

La collecte des données de l'EIPBF 2014 a été effectuée au moyen de questionnaires en papier. Les données collectées ont été saisies sur CSPro. Un programme de contrôle de qualité a permis de détecter pour chaque équipe et même, le cas échéant, pour chaque enquêtrice, les principales erreurs de collecte. Ces informations étaient communiquées aux équipes de terrain lors des missions de supervision afin d'améliorer la qualité des données. La vérification de la cohérence interne des réponses a été réalisée d'octobre à décembre 2014.
